Hey there, was busy with stuff around the house and didn't notice anyone had joined! Awesome! I have gotten a few suggestions about the program and updated it. The latest version 1.0.10 is in the Files section. I have also updated it to keep up with the Beta F/W changes, if anyone is using that. I think its almost at its full potential, but if anyone else can think of features that would be useful, let me know!

From: dallasreact112
Topic: 4 Message: 4

I have a question. When I print out the Data Assistant html, the alarm status is showing disabled. I don't believe they are as I am using all 5. Am I missing somthing here? Also would there be a way to print a Macro table that instead of showing the Actions would show the actual numbers that correspond to the actions? This in effect would be a paper copy of the Macro # programming as it would be seen in RCP.

Great work on the program. I like it because I directly import the HTML into MS Access which I use to document my RCP.

Sorry it has taken so long to reply, I only check the website, and overlooked your post.

For the alarm status, it simply shows what is found in the RCP .dat file, within RCP, you can setup the alarms, but they are all considered as disabled, until they are turned on, usually via DTMF/Macro. So while they may in fact be in use, they could still print as disabled because of the way RCP handles them. The easiest solution is to scribble a note on the page when it prints.

As for you wanting to print the function numbers instead of the description of the item, I will make that an option, in the next version, but its hard to say 100% when that will be. Its a simple thing to do, but give me a week or so and Ill update it.

thanks,
james

9. .ctl file

Yahoo group: rc210_assistant
Date: 2010-05-31 01:38:13 UTC
From: tim b
Topic: 9 Message: 9

I am very happy with the program, but would like to suggesr that it use a ctl/dat file so we don't have to select each and every time we want to use it where out .dat file is and what we want to view, a WAY FOR IT TO KEEP TRACK OF our last options we wanted, ie: input/output filenames
and our box selections and custom headers

some of us namely myself are sl o o o o w type-rs

just a suggestion

Tim.

Thanks for the suggestion, I am about half way done with it, this will appear as a "Save" and "Load" option. If anyone else has any suggestions, get them in now, and they will be added to the next version, 1.0.15.

thanks,
james

Topic: 2 Message: 14

I have uploaded the most recent readme file, here are the latest changes:

1.0.15
-Added two buttons, "Save" and "Load", These buttons allow you to save your
current options and file paths. - This added at the request of KC8UQP
If you try the "Load" button before you have used the "Save" button,
then this will most certianly cause the program to crash everytime.
After using the "Save" button, you can reload the options you saved, by
clicking the "Load" button. These settings are stored in a file named "Data Assistant.ini"

1.0.14
-Added options to print the port ID's and tail messages. -Suggested by Wa4HVP
-Added an annoying popup, sorry. This popup points out the address for
the Data Assistant Group, please join, this will help keep Ken's mail
box alittle less cluttered, hopefully. -KC5TDG

1.0.13
-Added option to allow macro printing to show macro codes instead of
description of the task preformed. - This added at the requestion of K5BP

15. Macros

Yahoo group: rc210_assistant
Date: 2010-06-01 18:06:06 UTC
From: dallasreact112
Topic: 15 Message: 15

Hi,

First let me compliment you on a great job with RC210 assistant. I can import the HTML output to MS Access directly which is very convienient.
I would like to make a request/suggestion. Could you also include a separate Macro table which shows the function numbers? I know your table already shows the actual function descriptions. The numbers would be handy if one fat fingers or dumps a function inadvertently. This way one would have a hard paper copy of the numbers (actual programming). Then one could easily reprogram a missing/bad line without needing translation from the function description.

From: kc5tdg
Topic: 15 Message: 18

Yes, I updated that in 1.0.13, the options, Macros, and Use Macro Codes need to be checked, and it will list the codes instead of the descriptions. Hope this is what your wanting.

add a ip to the .z to make .zip and that link should work, otherwise, just click the files link over on the left menu and try to download from that page.

21. Saving Settings.

Yahoo group: rc210_assistant
Date: 2010-06-10 15:52:15 UTC
From: kc5tdg
Topic: 21 Message: 21

I used the save settings feature myself yesterday. Updating my .dat file with RCP to match the changes I made over the air via DTMF. Then used data assistant to make my .html file.

What a time saver, takes about 3 seconds and just a few clicks and you get the same .html file every time, only updated.

Just wondering if anyone is using the feature, and if it is working as expected.

thanks,

24. Version 1.0.16

Yahoo group: rc210_assistant
Date: 2010-06-13 15:45:17 UTC
From: kc5tdg
Topic: 24 Message: 24

Changes in version 1.0.16, include:

Removed startup popup dialog that pointed to this support group.

Changed "Use Macro Codes" to "Show Macro Codes", also, you must have Macros and Show Macro Codes checked to print the actual codes, this will still print the description as well, on the next line it will list the programming codes.

There were no major changes, and none that will affect your saved default settings. You can simply replace the .exe file with the new one, and any saved settings you have, will still work.

james

Thanks James
If it is a choice between by hand or your program, I choose your program.
I am sure all of us know what it was like to map the controller before James made the assistant.
You seem to get the updates before I can suggest any. Keep up the good work.

Thanks again Daryll kg9nd

Thanks for the comments. Im thinkng about adding the commands that are used in programming in each section header also, like *4002 - Program Macro, etc...

Would like to add some big eye catching features, but have no ideas ATM.

Would like to see the timers added.

Question on Tail Messages. It shows disabled tail message fine, but says Use Tail Message 3 when enabled. Shouldn't say Tail Messages Disabled and Tail Message Enabled? Mike

Found the reason that was happening, it was only looking at Port 1 tail message setting, It was still reading the tail messages, if set, for ports 2 and 3, but still only looking at which one port 1 used. Ive fixed that. But I dont fully understand tail messages, I think I understand how to set them up, but Have never used them. Since you are, when the new release is posted, can you give a jab at the changes Ive made, including the Tail message counter and timer, and tell me if everything jives ?

Ive also added port timers, I think this is what you were asking for.

thanks,
james

31. Version 1.0.17 - Description of changes

Yahoo group: rc210_assistant
Date: 2010-06-17 14:54:20 UTC
From: kc5tdg
Topic: 31 Message: 31

1.0.17
-Fixed bug in tail message printing, was causing most of the data to be read from the settings for port 1 only. - Reported by WA4HVP
-Minor changes to tail message layout, should now show the tail counter and timer setting.
-Added port timers - Requested by WA4HVP
-Changed the unlock code section layout, just made it match the others alittle more.
-Also recoded the section that prints the unlock codes.
-Added check at startup to make sure the new options for Port Timers do not cause crash when "Load Defaults" is clicked, this just writes the entries to the file so the program does not get a return of "null" and crash.
-Note: The inacivity listing in port timers will show as # (#) the # in () in the macro that is called when the timer runs out, if set.
-Minor changes to the GUI, mainly with port related items.

As I said, Im not familiar with Tail Messages, but I think I understand what your asking here.

Would something like "Enabled, Use Message #" work, Showing the word "enabled" would add clarity, but I also want to keep the selected tail message to be used shown as well. Some folks I know have setup rotating tail messages, or do the tail messages rotate by default ?

Tail messages are turned on and off by macros via the scheduler. ☐Tail Messages Enabled☐ would be more appropriate. On the one controller I am looking at, I only use Tail Message 1. Now on another controller, I use all three Tail Messages, at different times. I hope I am clear.

35. run-time error 75

Yahoo group: rc210_assistant
Date: 2010-07-13 03:51:59 UTC
From: tim b
Topic: 35 Message: 35

I have been running this program for sometime

w/o errors no changes other then firmware to the rc210

I have defaults setup and I have use them w/o troubles

tonight I got the run-time error when trying to make the .HTML file

why?

steps I tried was deleting old HTML, checked the .DAT file for errors
none found all paths right and files where they are to be....

Tim

Hello Tim,

The run time error 75 has to do with file access. A few questions,

What version of windows are you using ?

And are your right clicking the program and choosing "run as administrator"

If that doesn't help, or if you are running as admin, what is the path
you are trying to save the .html file to ?

James

38. Correction - Clock Maintainer

Yahoo group: rc210_assistant
Date: 2010-07-26 17:36:22 UTC
From: kc5tdg
Topic: 38 Message: 38

I tried to repost the message about a Clock maintainer, if anyone got the message with the incorrect Subject line, please accept my apology, as the message is about the RC210 Clock, not chickens...

I am considering writing a program to maintain the clock in the RC210 via serial port. This would only be useful to those who have a PC connected to the RC210 at the repeater site full time.

It would allow you to specify when it would perform maintenance to the clock, at startup, daily, or manually.

This function is already provided in RCP and can be done manually, this program would just automate the process.

It is not intended to be a replacement for the RTC option, which provides additional memories as well as maintaining the RC210 Clock.

If this idea is liked and supported, I may also add an option to fetch local weather forecasts with the program via RSS from either NOAA or NWS and change the CT, here in tornado alley, it is common practice to change the CT of the repeater when there is a threat of sever weather.

Looking forward to input and replies.

Again, please forgive me about the incorrect subject like, which may lead some to believe the message was about chicken maintenance.

42. Comm communicatio

Yahoo group: rc210_assistant
Date: 2010-07-27 17:36:52 UTC
From: kc5tdg
Topic: 42 Message: 42

Thanks for the input and replies about the Clock program. Is anyone here familiar with Visual Basic and the MSComm control ? I successfully have the program setting the time and date.

I am also using a port monitoring program. When I set the clock with RCP the RC210 replies +*5100 as it should, same as for the date, +*5101, same for hyperterminal.

But when I set it from the program I have written I do not get these replies, my guess is that something in my comm port settings within my program are preventing the replies.

If anyone may be able to help that will get things moving along a little quicker.

Please Note: If I receive assistance with this, I will consider it to be a group effort, and that being said, I will make the source code open for everyone to modify/learn.

thanks
james

Ok, I got this figured out. I have posted on the RC210 board asking Ken to add a way to call macros from the manual data send, or in this case the serial port. While there are alot of things that can be accomplished as-is, it would make possibilities of a utility like this almost endless if this feature could be added to the RC210.

44. Clock program - update - progress - beta

Yahoo group: rc210_assistant
Date: 2010-07-28 16:02:28 UTC
From: kc5tdg
Topic: 44 Message: 44

Ok, I successfully have the program setting my calender and clock.

I need to do some refining, but look for a beta post tommorow.
The program will be called RC Assistant, and trust me, it will look better as of the first stable release, which should take no more than a few days from now.

As a toy to show off what is possible with this, it will also have a button and drop down box to change the CT.

They way I have been testing it is to set my system clock back 1 hour and to the previous day, then running the program and verifying the change via DTMF and a macro to speak the time and date. Then changing the system clock to the correct time and date, and doing it again.

thanks,
james

45. RC Assistant Beta

Yahoo group: rc210_assistant
Date: 2010-07-29 16:07:58 UTC
From: kc5tdg
Topic: 45 Message: 45

I have posted the beta of the RC Assistant in the files section.
The file is RC_Assistant_beta1.ZIP

There is no read me or help file at this time, I will be working on one that will be included in the stable release.

The options should be easy to follow. You will need to choose the same Comm Port that RCP uses.

There is also and Incoming data, and Send Buffer area, you can ignore these unless you get errors, or problems setting the clock or CT, in which case please post the contents of those boxes tho this forum.

You will also get an annoying popup that tells you about it being a beta version, and it WILL close at midnight + 01 each night. In order to prevent it from closing you will need to type the words "no close" without the "'s in the Special box, then press enter, if successful it will tell you so. This must be done each time the program is opened. But if most cases it will probably be left open 24-7.

I have been using the program on my repeater and I think I have the glitches worked out, but PLEASE let me know of any as soon as you find them so we can get this program developed further, and incorporate the RSS feed for weather events, etc.

Also please post anything else you would like to have put in the program.

thanks
james

Has anyone used the program ? What where the results ?

I have updated the application to fetch weather data from Google, they had the easiest RSS feed to get data out of.

I have added a section for weather that fetches current weather conditions and displays them, it uses your zip code to get this information.

As an option of the weather, the only thing it will send to the controller at this time is the temp. It programs a message macro with the current temp, the message macro to be uses is settable.

The temp can then be called via a macro, or in my case, the controller announces the time and temp at 1:13 pm and 10:51 pm on weekdays.

The weather information is updated once every 60 minutes, but I may make this adjustable later.

The hope to fetch weather warnings is looking a little dim, as I have not found a suitable source to do so from.

Items I am planning to include from the weather data is wind direction and speed and humidity.

Anyone else got more suggestions or ideas ?

thanks
james

James,

Have you looked at Weather Exchange from Ambient Weather? It will produce a CSV file that has all the information you need. I don't know if this will be easier than your current implementation. The only hitch is I believe it only works stateside.

Jim,

Took a look at this, but noticed the one near me doesn't give reliable info, and in some cases there may not be a station near the repeater wishing to make use of it.

thanks for the pointer, looks like a neat proggy.

49. RC Assistant

Yahoo group: rc210_assistant
Date: 2010-08-02 11:14:16 UTC
From: kc5tdg
Topic: 49 Message: 49

Ive been using the program and haven't seen any issues with it. I did start to see that some people may not want to have all the fancy features of it, so everyone may be happy to hear that I have re written it as a plugin style application.

The main host application simply provides the communication protocol to the RC210, and each plugin will provide the functionality.

This will let everyone decide what features they want to use while keeping window clutter to a minimum.

It will also allow others to write plugins and expand the program as they need and contribute the plugins to the group if they wish to.

I will post the new host application, and a few plugins, with source sometime this week.

james

50. RC Assistant Host application

Yahoo group: rc210_assistant
Date: 2010-08-03 17:03:40 UTC
From: kc5tdg
Topic: 50 Message: 50

I have uploaded the RC Assistant Host application, Yahoo is acting goofy and will not allow me to download the file at this time, but hopefully it will later.

I have already noted a few small issues, the Application needs a minimize button, I need to make the program check for an open comm port and attempt to close it before attempting a connection to the RC210 (may have been an issues on my pc)

This is my first plugin style application, please understand any issues, and point them out, I WILL fix them as soon as I can.

I work in an Iron Foundry, the average temp in the building is well over 100 degrees, anyone familiar with heat stress knows that it can lead to confusion, I have been feeling this for the past two days, to the point I believe I left a tool in a machine yesterday, NOT SURE THO! Anyhow, due to this I am going to back off of here for a few days, I will read and respond to all posts but the program all seems to be adding to my confusion, so although I will be taking a break from it for a few days, It will be improved and the other plugins will be written soon.

thanks,
james

51. Weather Addon

Yahoo group: rc210_assistant
Date: 2010-08-04 17:31:29 UTC
From: kc5tdg
Topic: 51 Message: 51

For anyone who has downloaded the RC Assistant V2, the Weather Plugin has been released.

The plugin takes weather data, (temp, humidity) and programs them to a message macro.

The data is gathered based on the zip code you enter into the plugin.

You can download the weather plugin by clicking on the Weather Link within the RC Assistant V2 program, if you have the program running, right click the info page and click refresh.

From: James
Topic: 52 Message: 53

Ive been away from the boards for a few months, what version firmware are you using ? Im assuming that your using 5.285 or higher, thats when 350,351, and 352 took effect for stopping the general timers. When you say it doesn't handle it, does it simple omit them from the output or ?

Im looking at the code in my program and see it there,

```
macro = Replace(macro, "347", "Start General Timer 1")
macro = Replace(macro, "348", "Start General Timer 2")
macro = Replace(macro, "349", "Start General Timer 3")

macro = Replace(macro, "350", "Stop General Timer 1")
macro = Replace(macro, "351", "Stop General Timer 2")
macro = Replace(macro, "352", "Stop General Timer 3")
```

You might try downloading the data assistant again, and if your using above f/w 5.285, make sure you have the checkbox marked that says

F/W 5.285 or higher

if this doesn't help let me know either way, Ill look into it further.

If you are using above windows xp, you will most likely have to right click the program and run it as administrator so that it can write the .html file, or choose the path for the .html as one that you have write permission to.

It's still in beta, so obviously things can change, but from what I have seen with my own setup and running it so far, is just the newer function numbers that are available obviously don't have definitions for them.

Charles,

I found the document I needed in the beta downloads, Ive sent Bob an email asking if he would like help with it, or what his plans are to update it. Either way we'll get an update, the last major update was for F/W 5.285 which I cant seem to determine if that FW was ever issued as a stable release or not, or if Ken has just been working at a stable release since that time.

Keep checking back and when I have more to pass along about an update I will.

James

This functionality really should be part of the RC-210 programming software, but isn't. There needs to be an easy way to document settings to make them easier to make available to those needing them.

I am not a programmer, but I'd think someone could do this.

There seem to be a couple of commands the program does not understand how to translate.

If we can get the source code this can be fixed.

I sure hope you or someone, can pick up the slack and make it run again, I really like the way Data Assistant organizes the data.

I edit the results also and use the macros as my list of commands. My list is a bit long.

Can we get source code? It mostly still works. There are some codes it does not know how to interpret into descriptions.

75. Installation Error

Yahoo group: rc210_assistant
Date: 2014-04-05 05:07:57 UTC
From: <ar15dcm@...>
Topic: 75 Message: 75
Attachments: 1 described; binary payloads are missing from this source WARC

Hello,

I just downloaded the software, extracted then ran the installer. I got the attached error and the installation would not continue.

I am running Windows 8 on my laptop.

Thanks,
Dean

Okay already made the fix.

Although I got the error the software had indeed installed and the Arcom RCP Programmer folder was on the start list.

Run the program and you will get an error stating that the Comdlg32.ocx was not found or unable to register.

To fix this, follow these instructions;

First open the folder at C:\Arcom\RCP Programmer Look for the file Comdlg32.ocx Right click on it and select copy Now go to the folder at C:\windows\system32 paste the file into this folder.
* to cover all possibilities, I also copied it into the SysWow64 folder.
Now to register the .ocx

Go to the Start Menu > Windows System Right click on the Command Prompt icon and select Run as Adminitrator Once it has opened, type regsvr32 Comdlg32.ocx and hit enter. A box will pop up telling you it was successful.
Now it is fixed, just run the program.

Hope this will help anyone who encounters it.

Dean

Oh ! I forgot to mention...

IMHO this is easily fixed by copying the file to the system32 before the .ocx registration takes place in the installer script and/or by adding the C:\Arcom\RCP Programmer to the path.

From: kb3grf@...
Topic: 80 Message: 80

Hello I have rc210 controller and have repeater on port 1
And remote base port two echolink port three when
port three and port one linked I loose control of port one
can not do any function such time dvr tests or
Simply try and drop the link does anyone else have this
Issues with the latest version software two other repeater owners tell me they
Had too roll back too older rcp to fix this. Any help
Would be great with this thanks kb3grf
